

Reduce Your Carbon Footprint!
Follow the 3 Rules!

We can do the three rules to help the Earth.

1) Turn off the lights.

Turn off the light so that when you come back in the room you're not wasting energy. If you don't turn off the light, carbon dioxide will be emitted from the power plant.

2) Walk or Bike.

If you walk to school, you're not producing any carbon dioxide. Biking is good too because that also doesn't produce any carbon dioxide. If you drive too much, carbon dioxide will go out of your car and the air will make carbon dioxide fly away and the carbon dioxide will go to the North Pole and the polar bears die because of the carbon dioxide.

3) Recycling.

If you recycle, then you can save the Earth from getting polluted.

That's the three rules!
